ABSTRACT

A system, method and computer program product are disclosed for distributor/supplier selection in a supply chain utilizing a network. Information relating to a plurality of distributors/suppliers of a supply chain is collected. At least one of the distributors/suppliers is selected based on the collected information. A contract is then populated based on the selected distributors/suppliers. The contract mandates that the selected distributors/suppliers provide supply chain data. The supply chain is then managed utilizing the supply chain data.
